

REPORT ON WASTE MANAGEMENT & ENVIRONMENTAL SANITATION

On 29th December, 2021 Tiger Trust along with Bal Bharati Public School conducted a virtual session on the topic 'Waste Management and Environmental Sanitation'.

The program was conducted in 2 sessions for the students of class 3 and 4.

The session commenced with the enlightening words of Mrs. Anjana Gosain.

The session was further conducted by Shalini Nair, who made this session very encouraging and promising for the students and informative and enthusiastic at that.

A PowerPoint presentation was present on waste management and proper disposal of waste. The presentation included detailed information about the sources of waste, types of waste and the 3Rs hierarchy. The presentation had multiple pictures and content which was easily relatable and interesting.

Followed by the presentation, a quiz was conducted to make the session more cheerful and interactive at that. The quiz was attempted brilliantly by the young minds. The students participated enthusiastically and maintained decorum.

The students shared their experiences and examples of managing waste at home and school. Some of the waste disposing techniques are Landfills, Recycling, Composting, etc. Various advantages of waste management like decreasing bad

odour, reduces pollution, reduction of produced waste, generation of employment, produces energy were discussed.

The program was based on the issue of waste and its proper disposal. Waste has always been a very neglected topic in our society and has not been the centre of attention by the government or national citizens but if we come together, we can not only protect but transform the serene beauty of the nature and its surroundings.

We live in a country which has beautiful geographical features but we as citizens do nothing to protect and preserve it.

We litter the environment and then ourselves complain about the filthy environments.

The session was a successful event and the students have taken a pledge to protect the beauty of nature. In order to maintain a healthy life, proper hygiene and sanitation are necessary.
